

ATU AI Task Force

Teaching and Learning – Committee Update 09.24.2026

Activities/Status

The Teaching & Learning subcommittee of the AI Task Force is working toward a set of strategies for both students and faculty, emphasizing both the development of fundamental human skills and genuine, critical AI literacy.

Our projects right now include:

- A pilot course on AI literacy, with the long-term goal of adding this material to the General Education curriculum. The course will address the range of technologies commonly branded as "AI" and invite students to experiment with both their uses and limitations, while considering the cognitive, ethical, social, and economic ramifications of AI technological change.
- A set of best practices for course design that will encourage deliberate, human-centered choices in students' AI usage, set guardrails on assignments where fundamental learning is threatened by AI, and establish clear methods for identifying and addressing AI-related academic misconduct.
