*Students who complete the program:*

- Graduate students will demonstrate an understanding of theories and methods in psychological areas both applied and experimental. Success will be reflected in performance on papers and presentations in graduate-level courses. Specifically, students will be able to demonstrate proper use of APA style, substantive understanding of materials and applications, depth and breadth of literature reviews, appropriate use of methodological and statistical techniques, and ability to orally present information and lead discussions.
- Students will express interest in and increase participation in professional presentations, research symposiums, and peer-reviewed publications
- Demonstrate proficiency in and understanding of different types of research methods in psychology, including all aspects of planning and conducting a project.
