

HEALTH INFORMATION TECHNOLOGY PROGRAM

ABOUT HEALTH INFORMATION TECHNOLOGY

The Health Information Technology (HIT) program provides students with the skills and competencies in health data management, information policy, information systems, and administrative and clinical work flow critical to function in an electronic environment.

Students will learn the basic concepts and functions of the origin, use, content, and format of the health record; gain an understanding of the legal and ethical responsibilities of a health care facility; and gain an understanding of the electronic medical record and its use in the health care facility.

This program will provide students with the skills necessary to sit for the national exam for certification as a Registered Health Information Technician (RHIT).

With the nearly universal implementation of electronic medical records and communications, this program will provide increased employment opportunities in the expanding traditional and nontraditional health care industry.

The Health Information Technology Associate degree program at Arkansas Tech University-Ozark Campus is accredited by the Commission on Accreditation for Health Informatics and Information Management Education (CAHIIM), 233 N Michigan Avenue, 21st Floor, Chicago, IL 60601-5800; telephone: (312) 233-1100. <http://www.cahiim.org>.
