| Approval Period: | | - | | |
| | Start | | End | |

7. **Training:** The PI must approve or oversee the qualifications, training, and safety of all personnel who will be handling animals associated with this research protocol. Mandatory CITI Training: All personnel on this protocol are required to complete the following courses through the CITI program (www.citiprogram.org):

- 1) Working with the IACUC, Conflicts of Interest, & Biomedical Responsible Conduct of Research
- 2) Appropriate species-specific elective course(s) depending on the research protocol.

Certificates of Training for each required module should be submitted with this application. All personnel completing field research with wild animals (wildlife and/or fish) need to also complete the "Wildlife Research" module. CITI considers fisheries research to fall under the category of "wildlife research", so there is not a separate fisheries research module.

Section 3: Animal Procedures

| 3.1 Please provide a concise description of the proposed procedures that involve the use of animals in this research/project. Where appropriate, this section should clearly identify specific procedures intended to minimize pain such as anesthetic, analgesic, or tranquilizing drug application if utilized. Please cite the appropriate references for all methods used. <i>Note: An annual report of the actual number of animals collected by species must be provided to the IACUC</i> . |

Section 5: Statement of Compliance

| 3. Statement of Compliance |
|---|
| As the individual responsible (Principal Investigator/Project Director) for this research protocol: |
| I confirm: That I have completed all required training modules. (Listed on Page 3, Number 7) That all individuals involved with animal use in this research protocol will complete the required training. That all individuals involved in this research protocol will be instructed in the humane care, handling, and use of animals prior to any participation in this research protocol. That I will review the required training and qualifications of all individuals involved with animal use prior to any participation in this research protocol. That the wellbeing of the animals used in this study has been considered in the designing of this research protocol. |
| I agree: Not to proceed with any portion of this research protocol, including the purchase of animals, until I receive written approval from the Arkansas Tech University Institutional Animal Care and Use Committee (ATU IACUC). That no substantive change(s) will be made in items contained in this proposed research protocol without prior written notification to and approval by the ATU IACUC. To allow inspection of my research facilities by members of the ATU IACUC and the Animal Welfare/Attending Veterinarian and to comply promptly if informed of any violation of the Arkansas Tech University Policy on Animal Care and Use. |
| I understand: That failure to comply with the above may, ultimately, lead to revocation of my privileges to conduct animal research at Arkansas Tech University. It is unlawful to begin work until the required state and/or federal permits have been issued for this research, and that the IACUC may request copies of all permits for the administrative record. |
