

ARKANSAS TECH UNIVERSITY

GUIDELINES FOR STUDENT INTERDISCIPLINARY RESEARCH GRANTS

Arkansas Tech University awards up to three Student Interdisciplinary Research Grants to enhance efforts among departments and students for professional growth and development. These grants support faculty and student initiatives across all disciplines.

1. Eligibility

- The project must be interdisciplinary and involve three to five students from different departments and preferably from different colleges. Graduate students may be included.
- At least two faculty members in different departments, preferably not in the same college, must be involved.
- The project must increase the “global awareness” of the students and faculty involved.
- All tenure-track or tenured faculty are eligible to apply.
- Only one proposal per person will be considered at each application period.
- Proposals similar to previously funded projects by the same Principal Investigator or Project Director (PI/PD) must explain how the current project differs from the previous submission(s).

2. Application Process

- Each proposal must contain all elements specified in the Required Format section (see page 4).
- The application will need to include signatures of the appropriate department head and dean on the proposal cover page.
- A signed original copy must be provided to the Office of Sponsored Programs (OSPUI) in one package by the due date for the particular review cycle in which the faculty member is applying.

3. Deadlines

- Department and college approvals must be secured and proposals submitted to the Office of Sponsored Programs by 5:00 p.m. on the deadline date.
- Proposals will not be accepted for the current review cycle after the designated deadline.

4. Review Process

Academic Affairs will review the grants on the following bases:

- Educational significance
- Soundness of design, procedure, or operational plan
- Adequacy of personnel and facilities
- Economic efficiency
- Other as required

5. Responsible Conduct of Research

Protocols for research with human subjects must be approved before projects may begin. If the proposed protocol has been approved, please attach a copy of the approval. Otherwise, indicate on the application when the protocol will be submitted for review. Forms and application information are available online at https://www.atu.edu/ospui/human_subjects.php. Funds will not be released until required approvals are completed.

6. Award Information

- Grants will be awarded for an amount up to \$10,000.00 per proposal.
- All publications (including programs for creative projects) must acknowledge funding support from ATU.
- A brief monthly report regarding progress is due to the Vice President for Academic Affairs by e-mail to academicaffairs@atu.edu.
- Funds must be spent by June 15th but preferably prior to the Arkansas Tech University Senior Honors and Student Research Symposium.
- Research funds allocated but unused by June 15th will revert to the research account for re-allocation. If the grantee is not using or not planning to use the funds, he/she should notify OSPUI as soon as possible.
- Electronic copies of the final written report must be submitted to the department head, dean, Vice President for Academic Affairs, and OSPUI no later than October 1st following the end of the project period. Grant recipients will not be eligible for future grants until the final report is *received and acknowledged*. The final report must follow the indicated format:
 - A. Title Page
 - B. Restatement of problem researched or creative activity
 - C. Brief review of the research procedure utilized
 - D. Summary of findings
 - E. Conclusions and recommendations
- Copies of manuscripts or abstracts based on the research published or submitted for publication should be returned with the final report. For a creative work, a program or publicity for an exhibition, reading, or performance should be included.
- Once projects have been completed, the project director must submit a complete accounting of funds expended to OSPUI, including copies of all applicable purchase orders and travel forms. Expenses paid by other funding sources, including any payment or honorarium for services granted by an organization should also be noted.
- Project findings must be presented by the students at the annual Arkansas Tech University Senior Honors and Student Research Symposium and preferably other venues.

7. Budget Guidelines

- Institutional cost sharing: Academic Affairs encourages colleges, departments and/or programs to provide a cash or in-kind contribution on all student interdisciplinary

research proposals. Academic Affairs views such contributions as evidence of college/department support and endorsement of the proposed research.

- Please describe how all project costs will be covered. For example, if the student interdisciplinary research grant request is for partial funding of a larger grant request, the applicant must explain how these costs will be covered so that reviewers can assess the likelihood that the applicant will have the resources needed to complete the project.
- Plan your budget carefully. Budget revisions above the granted amount will not be approved.
- Allowable costs fall into the general categories of graduate assistants, other student labor, benefits, supplies, equipment, copying/printing, postage, travel, and other services. Itemize and provide justification for expenditures in each category.
- Student research assistants: To plan your budget, refer to the Graduate Office and Business Office policies. Non-ATU students may not be hired with student interdisciplinary funds.
- Equipment: Applicants requesting equipment must provide a compelling rationale for the equipment, including evidence that this equipment is not already available elsewhere on campus. Requests for office computers, laptops or computer upgrades will not be funded. All equipment and supplies purchased will remain departmental property unless specifically assigned elsewhere. Once equipment is received, the grantee shall ensure that it is properly entered in the university's equipment inventory list.
- Travel: All domestic, international, and local travel costs are eligible budget items for the conduct of research and creative activities. Such requests must be justified in the proposal and the relationship between travel and the project objectives must be clearly linked. Student travel money may be requested if students are an integral part of the research project and their research activities are adequately supervised by the primary investigator.

FORMAT REQUIRED

The required elements of the proposal may not exceed 4 pages and should be double-spaced with 12-point type and 1-inch margins. Attachments may be added as needed, to a maximum total of 10 pages for the complete application. All pages must be numbered. Submit the signed original to the Office of Sponsored Programs and University Initiatives.

A. COVER PAGE

The required cover page, which must be fully completed, can be downloaded as a Word form at <https://www.atu.edu/research/graduateresearch.php>.

B. ABSTRACT

Provide a succinct and accurate overview of the entire project (approximately 250 words) that assists reviewers in understanding the goals and importance of the proposed project.

C. PURPOSE/OBJECTIVES

Begin the text with a concise statement of the general purpose and major objectives of the proposed project (the research question/focus, hypothesis, problem or work to be investigated, or aesthetic direction/technique).

D. SIGNIFICANCE/NEED

Research Projects: Include a concise literature review, identifying ambiguities or gaps in the literature, the need for the proposed research, and how this project will contribute to your field of study. Sources referenced must be listed in a bibliography.

Creative Projects: Describe the developments in your discipline or the observations that stimulated the proposed project. Sources referenced must be listed in a bibliography. Explain in this section how the grant would contribute to the development of your own work.

E. PROCESS FOR ATTAINMENT OF OBJECTIVES/GOALS

This section is a precise description of the process you plan to use to accomplish your specific project objective(s). It must contain a specific timeline for completing project activities.

Research Projects: Include a methods/design section with details specific to your discipline (materials, texts, archival sources, equipment, protocols, etc.). If the research includes human or animal subjects, give the date of approval (and attach a copy of that letter as an appendix) or the date the protocol will be submitted for approval. Protocols must be approved before work can begin and funds are released.

Creative Projects: Include a description of the source materials, processes and/or techniques that will be used for your project.

F. DISSEMINATION OF RESULTS

This section should demonstrate how you plan to disseminate or publicize your results (specify venues for exhibition opportunities, journals selected to submit article(s) for publication, etc.).

G. REPEATED REQUESTS

If this proposal is similar to one for which you previously received funding from Academic Affairs, describe how this current project differs from the earlier one.

H. BUDGET

Itemize the expenses required to complete your project using the following broad categories of allowable expenditures: supplies, equipment, copying/printing, postage, travel, graduate assistants, student labor, benefits, and other services.

Unallowable budget items are salary, stipend, or tuition for the PI/PD; computers; and the costs of publication or intellectual property that might result from a project. "Miscellaneous" is not an allowable item or category. Refer to the Budget Guidelines section (page 3) for more information.

Include the amount of time the PI/PD will devote to the project.

If outside funding is required, indicate how it will be secured.

I. BIBLIOGRAPHY

Provide standard citations for material referenced.

J. APPLICATION VITA (maximum: 3 pages)

Although no particular format is required, Academic Affairs look specifically for the following:

- Research and scholarly activity pertinent to the proposal, and previous grants, including how results were disseminated or made public.
