

ARKANSAS TECH UNIVERSITY

BOARD POLICY

Policy Number: 100

Subject: Role and Scope

Date Adopted: 05/89

Revised: 01/99

Arkansas Tech University is an institution dedicated to quality undergraduate instruction in addition to distinct graduate programs in a number of fields of study. Tech strives to provide a challenging and stimulating academic environment which fosters the intellectual development of students and faculty members. Programs are designed to prepare students for a challenging and competitive future by providing opportunities for intellectual growth, skill development, and career preparation. With instruction as its primary focus and in keeping with a strong liberal arts core, Tech will continue to provide educational opportunities to students who value the interaction and learning that Tech's teaching environment can foster. In addition, through the selective use of instructional technology, distance education, and other methodology, Tech will make its programs of study available to individuals who otherwise would not have access to quality programs. Attachment A lists the certificate programs and associate, bachelor's and master's degree programs recognized by the Board to be offered by Tech in carrying out its instructional role and scope.

Arkansas Tech University provides a variety of services to the general public, with special emphasis on professional development, improvement of public education, and support to social services. Activities are carried out through direct services to groups and individuals, as well as through partnerships with business and industry, school districts, governmental agencies, and community organizations. Many of these activities assist people in western Arkansas and the Arkansas River Valley. The Professional Development Institute and the Reading Education Center are two examples of valuable service activities being provided.

Scholarly research, continuing education, and other professional activities of the faculty are encouraged, promoted, and supported. Scholarship strengthens and complements the teaching emphasis at Arkansas Tech University by enhancing the curriculum, supporting instruction, and responding to the economic development needs and opportunities of Arkansas. Through innovative initiatives such as the Arkansas Center for Energy, Natural Resources, and Environmental Studies and key undergraduate and graduate programs, Tech actively promotes the participation of students and the community in research activities.

Attachment B lists the organizational units approved for Arkansas Tech University to carry out its instructional, public service, and research role and scope.
